DIA

About DIA

Short

DIA redefines oracles on 30+ L1/L2s: Fully customisable, unmet asset coverage, 100% transparent. Enabling new primitives for DeFi, NFTfi and GameFi.

Medium

DIA redefines oracles on 30+ L1/L2s: Fully customisable, unmet asset coverage, 100% transparent. Enabling new primitives for DeFi, NFTfi and GameFi.

DIA's data feeds are fully customized with regards to the mix of sources and methodologies, resulting in tailor-made, high resilience feeds and thereby setting a new paradigm for oracles.

Long

DIA redefines oracles on 30+ L1/L2s: fully customisable, unmet asset coverage, 100% transparent. Enabling new primitives for DeFi, NFTfi and GameFi.

From Price Feeds to Random Number Generation, DIA's product offerings cover all oracle needs a Web3 application might require. DIA allows the creation of price feeds for over 3,000+ crypto assets, 18,000+ NFT collections, 20,000+ traditional assets, Liquid Staked Tokens and more, with the ability to customize each feed for specific protocols and use cases.

With a unique architecture that aggregates raw trade data directly from 80+ sources, such as CEXs, DEXs and NFT marketplaces, DIA offers 100% source transparency and bespoke customization. Any data feed that is publicly accessible can be sourced, regardless of its listing conditions and trading volume - there is no dependency on third-party data providers.

This allows DIA feeds to be fully customized with regards to the mix of sources and methodologies, resulting in tailor-made, high-resilience feeds and thereby setting a new paradigm for blockchain oracles.
